WILDLIFE KERB HB2 915MM

ACO Wildlife Products

The ACO approach to creating products for wildlife mitigation looks at putting wildlife protection at the core of any infrastructure design.

Many of the products from the ACO range can be 'hard-landscaped' into the design at the project outset, or can be retro-fitted to existing infrastructure to provide robust, long-term wildlife protection.

At wildlifefencing.co.uk we believe that the ACO product range builds on our reputation as the leading supplier of wildlife mitigation products and helps us to provide a wider choice of options for sustainable wildlife protection.

Amphibians & roadside kerbs

Amphibians are known to proceed along any vertical wall or barrier that they encounter and bars their way.

A common situation where this can be a problem is on roads with raised kerb-stones along the roadside. This can act as an amphibian guiding system that directs amphibians along the kerbside and straight into a roadside drain openings.

A recent study of drain gully pots in Scotland has shown that 60-70% of drain gully pots contained some form of wildlife, mostly amphibians, and with no means of escape, resulting in starvation.

ACO Wildlife Kerb

The ACO Wildlife Kerb is designed to overcome this problem and help to prevent amphibians from falling into drain gullies.

The Wildlife Kerb replaces a standard HB2 kerb unit and is installed alongside a drain opening. It incorporates a recessed channel or 'bypass pocket' at road level that provides a safe passage around the drain hazard for any amphibians that are guided along the kerbside.

The Wildlife Kerb is manufactured from Vienite, an extremely tough, recycled polymer concrete material.

Specifications

Material:	Vienite Recycled Polymer Concrete
Length:	915mm
Height:	260mm
Width:	125mm

Dimensions replicate a standard HB2 kerb unit.
